

DESCRIPTION

Posifa designed the PMF5000 series of mass air flow sensors specifically for portable medical devices. The sensor is fast and accurate, enabling the precise amount of gas to be delivered in a pulse mode. The sensor's small footprint fits nicely inside a space-constrained housing. The stress-relieved wiring harness with pre-installed receptacle provides reliable electrical connection to the circuit board. The flow direction (forward or backward) can be customized to work with an existing system layout.

PMF5000 features Posifa's third-generation thermal flow die, benefiting from the latest innovations in microfabrication. The sensor die uses a pair of thermopiles to detect changes in temperature gradient caused by mass flow, delivering excellent signal-to-noise, and unsurpassed repeatability. The "solid state" thermal isolation structure on the sensor die eliminates the need for surface cavity or fragile membrane used in competing technologies, making the sensor resistant to clogging and pressure shock.

The PMF5000 series includes an analog version PMF5000V and a digital version PMF5000D that supports the I2C protocol.

The PMF5000 series is a proven product that has been used in quantity in FAA approved, FDA cleared, and CE certified medical devices.

1. SLM: standard liter per minute. Standard conditions: 0 °C and 1 atmosphere.

2. V refers to the analog version of PMF5000, and D refers to the digital I2C version.

3. Maximum deviation in output from nominal over the entire calibrated flow range and temperature range. Errors include offset, full scale span, linearity, flow hysteresis, repeatability and temperature effects over the compensated temperature range.

4. 10% to 90% rise time of the flow sensor to electrically respond to any mass flow change. May be affected by the pneumatic interface.

LINEAR OUTPUT

For **PMF5000V**

Flow Rate = $[(V_{out} - 1\text{ V}) / 4\text{ V}] \times \text{Full Scale Flow Rate}$

For example, for PMF5006V full scale flow rate is 15 SLM. When V_{out} reads 3 V, the Flow Rate is: $[(3\text{ V} - 1\text{ V}) / 4\text{ V}] \times 15\text{ SLM} = 7.5\text{ SLM}$

For **PMF5000D**

Flow Rate = $[(\text{Count} - 64) / 3967] \times \text{Full Scale Flow Rate}$

For example, for PMF5006V full scale rate is 15 SLM. When digital output reads 1000, the Flow Rate is:

$[(1000 - 64) / 3967] \times 15\text{ SLM} = 3.54\text{ SLM}$
